

New Infrastructure Inspections

The Town of Mount Pleasant requires that all new public (and some private) storm infrastructure be inspected. These inspections are required to be conducted by the project owner's construction professional (a P.E.) in order to be able to certify proper workmanship.

Recommended minimum inspections:

- Upon pipe delivery for damage
- During installation for proper bedding, foundation, gasket use, joining
- Delivery of backfill material
- Prior to backfill
- During compaction (compaction testing is required)
- Post installation video inspection

Please note that the Town adopts the CURRENT SCDOT specifications at the time of the project. There are a few installation exceptions, special requirements or interpretations. No work should be conducted without contacting and communicating with the Stormwater inspector at 843.849-2022.
