The Town of Mount Pleasant has a drainage system network that is comprised of over 100 miles of storm drain pipes, over 12,000 drainage inlets and over 25 miles of canal systems. These systems are prone to failure and damage as they age. The most common types of failures are;

- Clogged pipes or canals
- Sinkholes
- Broken structures
- Erosion
-

Please contact our department if you encounter an issue. We investigate every call. Some of the systems that serve our Town are owned by other agencies. We will notify those agencies if the issue belongs to their system for them to schedule repairs. Some repairs can be fixed right away, others will be include in our Capital Improvements and Asset Management Program.
